

Tour Management Solution

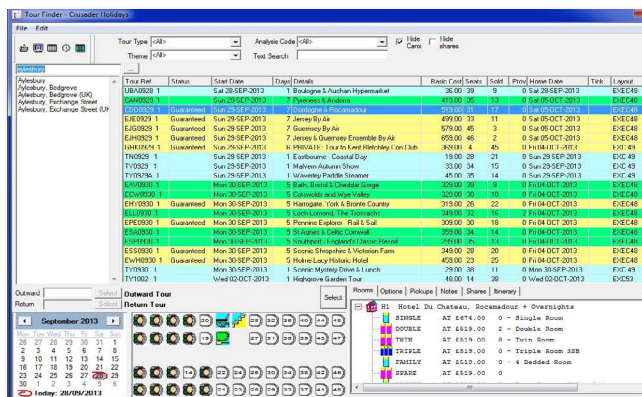

t³ is the passenger reservation solution for high volume coach tour operators, delivering all the processing power, scalability and security expected of a true client-server database product. Based on the SAP - Advantage Database Server (ADS), t³ builds on the excellent pedigree and proven functionality of our market leading t²⁸ passenger reservations system.

In addition to the rich feature set of t²⁸, we have extended the range of business functions to meet the exacting needs of larger organisation, including a revolutionary graphical interchange and pickup management option. There is even an easy migration path from t²⁸ to enable operators to upscale without having to re-enter any data.

t³ is a natural partner to WebRes - our market leading e-commerce web portal, which links your tour programme to the internet, enabling clients and travel agents to book tours and excursions directly over the net 24 hours a day, 7 days a week!

In addition to the core reservation system we have also added a contracting system for hotels, ferries, airlines, coaches and other tour inventory. These can be contracted in advance, accurately managed and then assigned to tours as they are built.

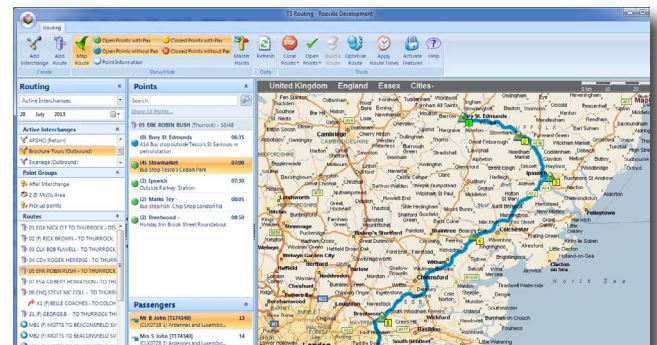

Loading your tour programme is straightforward, with no limit to the number or types of departures which can be operated. All hotel accommodation, options - such as show tickets - and coach seating plans can be assigned per tour and shared across multiple coaches.

The pickup system handles interchange, home collect and line of route models and we have built an impressive mapping application to manage the operational and financial aspects of routing. There is a wide portfolio of tour reports which can all be viewed on screen, printed, or faxed directly to hotels and coach operators.

Booking is simple, fast and intuitive whilst still managing to maintain a personal touch. Simultaneous bookings can be taken on the same tour, making the system perfect for large volume operators. Travel agent support has been greatly enhanced and agents can even book live and in their own time through WebRes.

t³ keeps tabs on all aspects of your operation, and has a full and informative Audit Trail. The cash management features give total control over the financial integrity of the product, including real time payment card processing using Verifone or Wirecard.

A wide variety of management reports includes daily booking activity, advertising responses and booking performance statistics. While multiple brands can be operated from the same data set, a Multi Company license is available and enables operators to effortlessly switch between brands held in separate data sets.

A multi layer categorisation system allows tours, clients, bookings and enquiries to be profiled for analysis, customer history and market extract purposes. The marketing system incorporates regionalisation and custom data-mining for highly targeted campaign extracts based on the clients historical records.

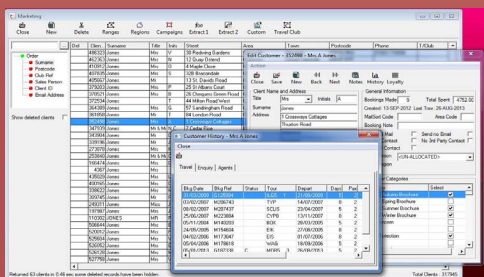

t³ has a voucher handling system for the issue and redemption of gift and holiday vouchers plus there is a powerful integral client loyalty points system based on frequency and duration of travel.

Custom data extracts at a functional level allow data to be queried and extracted from across the system in an infinite number of ways, with the data being exported to spreadsheets for further analysis and reporting.

Licensing and upgrade policy

We don't impose any feature restrictions on the base t³ system, but there is an increasing gallery of external applications developing to fit the needs of different businesses. These include interfaces to third party applications including financial and CRM systems and web consolidators including Door2Tour, CoachHolidays and Travel 55.

t³ supports a choice of payment gateway including VeriFone and Deutsche Bank 'Wirecard', for instant processing of client payments by credit or debit card.

We also offer a scheduling tool to automatically run background database tasks including data exports and automatic management reports, and can link with SMS texting and email marketing applications.

System requirements for t³

System: Windows XP, Windows Vista, Windows 7, Windows 8, Windows Server 2003, Windows Server 2008 and Windows Server 2012. Supports 32 and 64 bit operating systems (Business & Professional Editions).

Network: We recommend a 100/1GB network for local users and Terminal Services for wide area connections.

Database: SAP-Advantage Database Server version 10 or above.

Call for a demonstration
